There are two ANSYS products available for install: *ANSYS Classic* and *ANSYS Workbench*. I recommend that you install them both, but it is not required.
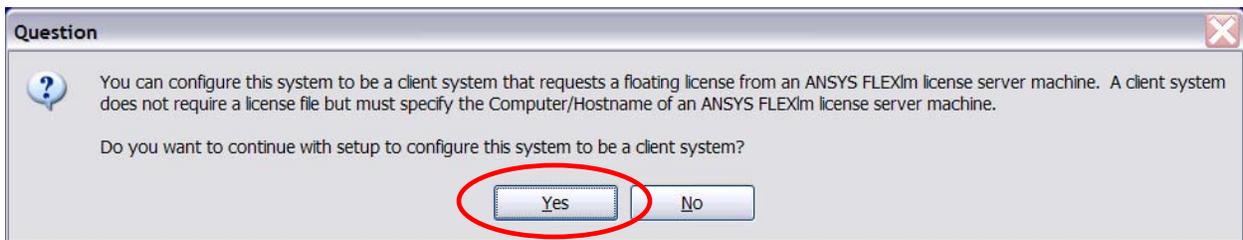

They are located at "`I:\soft_dist\ANSYS`". They are sorted by architecture and version.

Execute the "setup.exe" in the desired architecture/version folder and follow the prompts.
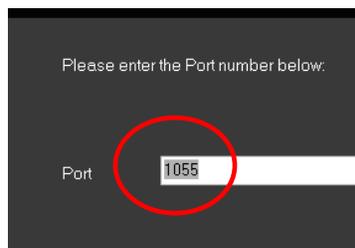

When it asks "`Is this a license server machine?`", click "`No`".

When it asks "if you want to configure the system as a client system?", click "`Yes`".

If it asks for a license server port number, use port number "`1055`" without the quotes.

If it asks for a license server hostname, use "`fermi-cadsrv-1`" without the quotes.
