# Welcome to PLM World 2006

- On behalf of the Simulation SIG and UGS Simulation Development Staff we welcome you to PLM World 2006.
- We are already off to a great start with the five earlier presentations.
- Introduce UGS Staff
- Introduce Simulation SIG Leaders

# Welcome to PLM World 2006

- This year's Simulation SIG Theme is:  
**Digital simulation: The power to imagine!**
- We believe that with the improvements now available available in I-deas 12m1 and NX 4.0 that Analysis and Design Engineers truly have “The Power to Imagine,” and to back up those imaginations with as good as it gets simulation.
- During the Conference you will have several opportunities to see examples and take training classes on performing valuable simulations on your product designs.

# Simulation Track Agenda

- Keynote Presentation – a recognized CAE leader will show how predictive technology is used in product development.
- User Presentations – have been expanded so that more than ever before you can see how other companies use simulation to improve their product development processes.

# Simulation Track Agenda

- UGS Simulation Direction Presentations – will help you stay ahead of the new technologies in the next release of UGS products and the long-term product directions.
- Simulation Workshops – add value for both new and advanced users, providing direct access to leading technology experts. An opportunity to expand your horizons.

# Simulation Track Agenda

- The Simulation SIG is committed to providing information that expands your “Power to Imagine”.
- This is reflected by the entire agenda and the availability of six hands-on workshops that cover the range of UGS Simulation products.
- **New This Year => Two of the workshops have been developed with user participation and will be jointly presented.**
- **AND, . . .**

# Simulation Track Agenda

- Like last year, . . .
- these workshop classes have been scheduled to not conflict with other simulation presentations.
- So you can attend a workshop session without worrying about missing an important presentation.

# Simulation Track Agenda

- The training workshops for this year's conference are:
  - NX™ Nastran Desktop with I-deas®
  - NX Nastran Advanced Nonlinear with I-deas
  - Best Practices for Large System Modeling and Solutions in I-deas
  - Dynamic Analysis with I-deas Response Analysis
  - Using NX Design Simulation
  - Using Teamcenter® data management with NX Simulation

# Simulation Track Agenda

- Last year we had three Simulation Track Keynote Speakers . . . This year we tuned that down a little based on Attendee response and have one, but a darn exciting one:  
*We are pleased to welcome Deane Jaeger from Harley-Davidson to present his views on how simulation is benefiting product development today and what the needs are for the future.*
- That presentation will be Wednesday morning at 9:45 – refer to the agenda.

# The UGS Goal and Simulation SIG Message Summed Up In This Quote . . .

- ***“PLM World is a vital two-way conversation we have with our customers. It is a great opportunity for us to listen to their software needs for improving their processes. In turn, we report how we use this guidance to set our product directions and we demonstrate our progress.”***
- *Jim Rusk, VP, UGS Digital Simulation Solutions*

# The Simulation SIG and UGS Goal and Message Summed Up In This Quote . . .

- . . . to work closely with UGS Simulation Development Management to make this goal as efficient as possible.

# THANK YOU FOR ATTENDING . . .

- UGS and PLM World Leaders really appreciate your attendance and we hope you have an enjoyable Conference experience.
